ERP Software

In our Institution we use Quiklrn as an ERP as it serves as an ideal platform for the digital transformation of teaching-learning processes (TLP) to facilitate outcome-based education.

Every Learner is unique and learns differently. Quiklrn platform gathers content from internal or external sources or personal source for each course or topic the learner is pursuing. Quiklrn helps learners to keep track of their learning paths by way of organizing the learning content, contextually linking with notes, links, videos, as digital pins. Learners can easily recall their learning paths and re-use at the point-of-need.

Drive end-to-end Digital transformation of Academic processes to deliver Outcome Based Education. Achieve targeted learning outcomes using innovative course delivery. Improve learner engagement with innovative content packaging. Analyze learning behavior of each student and re-align course delivery. Improve off-classroom engagement by sharing additional contents via presentations, solutions, videos, references etc.

Quiklrn uses encrypted content delivery and content specific access controls and ensures content protection from misuse. The learner can access content from any device, anytime from anywhere including offline access.

Quiklrn Adaptive Learning Platform helps to:

- Drive end-to-end digital transformation of Academic processes from course management, content management, and personalized delivery to students.
- Align course management to outcome-based education (OBE) framework
- Capture all teaching-learning process activities like course outcomes, session management, attendance, assessments, and attainments.
- Use standard templates to simplify creating supporting documents for accreditation and certifications.
- Gather learning insights for each student and use to navigate them to the designed learning path.
